

Comparison Document

IntelliPRINT

for Lotus Notes & Domino

Synaptris Widget Viewer & IntelliPRINT Dashboard Reporting (Viewer)

This document provides a comparison between **Synaptris Widget Viewer** and **IntelliPRINT Dashboard Reporting (Viewer)** to help decision makers to select the right product based on their business needs.

		IntelliPRINT Dashboard Reporting (Viewer)
Designed For	Distribution of charts for presentation purposes, embedding in documents or enabling data visualization for stakeholders who do not have access to applications	Visualization and analysis of real-time information from Notes & Domino applications for business decisions
Data	Offline & static. Widgets need to be saved and re-distributed frequently based on data updates	Real-time & dynamic
Visualization Capability	Single widget only	Dashboards with multiple widgets
Data Analysis Capability	Not Available	Available
Ease Of Use	Standalone utility. Widgets need to be stored and accessed independently.	Native to Notes & Domino. Dashboard Reports are available within the business context of users applications
Data Security	Does not inherit Notes ACLs. Based on user privileges, multiple widgets need to be created and distributed to different users.	Inherits native Notes Access Control Lists (ACLs). Access to information in reports is based on user privileges (i.e.) users view only the data that they are authorized to
Maintenance Overhead	Widgets need to be saved locally, distributed and managed based on access and data updates.	Centralized access with multiple users having access to the same report.
Technical Support	Not Available	Available
