

IntelliPRINT

Optimize your Lotus Notes & Domino Application Investments

Challenges with the Notes & Domino application platform

The hallmark of the Lotus Notes & Domino platform is the secure, collaborative application framework that offers identity based, document level security. It is this ease, agility and data security that has led to the deployment of a large number of Notes & Domino applications at several organizations.

The key limitation with the platform is that it does not support the ability to effectively meet the multiple and varying information needs of its users. In order to meet user needs, IT teams create a large number of Notes Views, which results in:

- Larger application sizes
- Poor application performance
- Lower usability and adoption
- Additional investments in server infrastructure
- Increased storage costs

Introducing IntelliPRINT

As organizations look to consolidate their Notes applications, optimize their Lotus Notes infrastructure and reduce costs, IntelliPRINT can play a significant role in helping them achieve

these objectives. The multiple Lotus Award winning IntelliPRINT offerings are native solutions for Lotus Notes & Domino that provide end users with advanced interactivity, data visualization and analysis capabilities. Trusted by the world's leading enterprises, IntelliPRINT offerings are used by over 2,000 customers across 80 countries.

IntelliPRINT offerings can help you achieve the following business results very rapidly and with minimal additional effort:

a) Reduce server and storage costs by over 70%

With each additional Notes View adding to the size of the database, there is a significant storage impact, which leads to increased storage and server requirements. By eliminating the need for additional views, IntelliPRINT reduces server and storage costs and helps consolidate the number of servers currently running Notes & Domino applications.

b) Improve application performance

Larger number of Notes Views are responsible for performance issues and lower response times. With fewer Views, Notes applications become much more responsive, providing end users a better user experience.

c) Minimize application maintenance effort and costs

In addition to server and storage costs, the usage of multiple Views increases the complexity, effort and cost of application maintenance. IntelliPRINT not only eliminates additional views, it also enables end users to use existing views to create the variants they need, thereby significantly reducing application maintenance effort.

d) Extend the life and usage of Lotus Notes applications

IntelliPRINT offerings help add new functionality and additional usability that users need, extending the life of Notes & Domino applications. The visually appealing and extremely usable information interface motivates end-users to increase usage of their applications and extends application life.

e) Increase returns from investments in the Notes & Domino platform

IntelliPRINT easily transforms the end user experience with Lotus Notes applications by adding cutting edge functionality, increasing application performance and enhancing usability. This increases and extends the returns from Notes & Domino applications.

Here is an example of how you can optimize and enhance the value of your Lotus Notes and Domino application investments with the new IntelliPRINT 2011 product releases:

- 1) Significantly reduce the number of Notes Views using Smart Views in IntelliPRINT**, thereby reducing storage, increasing application performance and minimizing application maintenance effort
 - Application developers / designers can recreate / replace all existing Notes Views using Smart Views
 - Smart Views provide all the functionality in Notes Views that the user is familiar with, but without the storage and performance overheads
- 2) Exceed user expectations by delivering additional Views in no time and with enhanced functionality**, thereby increasing usage and extending the life of and ROI from Notes applications
 - New Smart Views are easy to create and can be delivered in minutes
 - Users not only have the traditional functionality they are familiar with but also significant additional functionality such as Inline filtering for every column and a wide array of data visualization capabilities through built-in Charts and Pivots
 - Users can edit their existing Smart Views or add to them and create their own variants

Customer Talk

“Users are now thrilled with the visualization experience and ease of use... we are now able to focus on critical application development tasks.”

Stefan Kirsch,
Goodyear Dunlop Tires

IntelliPRINT Offerings

IntelliPRINT Analytics 4.0

IntelliPRINT Analytics delivers enhanced interactivity, functionality and data visualization for end users of Lotus Notes & Domino applications, without placing any overhead on IT. Here is how it transforms the end user experience and helps IT teams save a significant amount of time and effort:

- **User-defined Smart Views** – Smart Views are just like Notes Views but are user-defined, enabling end users to create and modify their views without impacting the Notes database. It also enables end users to interact with their data like they would in a spreadsheet, by repositioning / adding / removing columns, sorting columns, filtering data and providing a variety of analysis tools
- **Data Visualization with Active Charts** - Users can visually represent data in a variety of formats with the capability to drill down and filter data at will. The dynamic Active Charts option enables users to instantly transform any grid into a chart with a single click
- **Instant Associative Search** – Users can instantly locate any information they need using the extremely intuitive column search and filtering capabilities in IntelliPRINT Analytics 4.0

IntelliPRINT Reporting 5.5

IntelliPRINT Reporting enables developers to rapidly create & deploy presentation quality reports, and end users to visualize real-time data INSIDE Lotus Notes & Domino applications. Here is how IntelliPRINT Reporting 5.5 delivers value to end users and IT teams:

- **Advanced Reporting** – It teams can deliver pre-formatted business and regulatory reports to users in minutes. Reports can include charts, tables, pivots and other design elements
- **Seamless Integration** - IntelliPRINT Reporting is integrated seamlessly into Notes and Domino applications and provides support for native Notes security capabilities and functionality, including ACLs, LotusScript, Multi-value fields, @Formulae, and much more
- **Flexible Report Creation** - IntelliPRINT Reporting allows report designers to create reports from Notes views, selected documents in a view, multiple views in a database and multiple Notes databases

IntelliPRINT Dashboard Reporting 6.0 **NEW!**

IntelliPRINT Dashboard Reporting enables end users to create interactive dashboards with embedded analysis capabilities INSIDE Lotus Notes & Domino applications. Users can create, modify, extend and analyze their own dashboards, without adding to IT overhead. Here's what's new in IntelliPRINT Dashboard Reporting 6.0:

- **Dashboard Filters** - Enables end users to filter Dashboards in real-time (all widgets together, or each independently) by selecting any combination of values from the available columns
- **Multi-series Charts** - Gives users the ability to display multiple data series in the same chart delivering advanced visualization capabilities for complex business situations
- **New Chart Types** – IntelliPRINT Dashboard Reporting 6.0 also delivers enhanced visualization options, which include Waterfall and Funnel charts in addition to the existing chart types

Customer Snapshot

Customer Talk

IntelliPRINT is a logical extension of Lotus Notes which delivers industry leading reporting functionality. It is very easy to deploy and is a perfect fit for our business needs.
